Description:

Graph and Network problems are pervasive in our modern technological society, as witnessed by our reliance on physical networks that provide power, communication, and transportation. Many sophisticated methods, such as the combinatorial method, have been deployed graphs and networks. Therefore, the goal of this workshop is to provide a central forum for the distribution of timely information about graph and network problems, their design and mathematical analysis and efficient algorithms for carrying out optimization on networks. In addition, please note that submitting a paper to the workshop means that if the paper is accepted, at least one author should attend the workshop to present the paper.
